Acorn

wire and iron works™

The Best in the Business Since 1913

Acorn Wire and Iron Works has been providing access containment solutions for almost 100 years! Acorn #130A is fabricated using 10-gauge wire and "C" section panels to create storage areas that are strong, durable and have standard or custom finishes that are adaptable and reusable in different environments. Our line of 6-gauge, heavy-duty homeland security cages offers increased strength and durability. All of Acorn's products offer security without compromising ventilation, light, or supervision concerns.

Homeland Security

Wire mesh partitions as manufactured by

The Strength of Steel: 6 Gauge

Acorn provides products with an increased emphasis on strength to prepare for, prevent and protect against security threats. Acorn #135, our heavy-duty 6-gauge wire mesh partition used in Homeland Security Cages, has larger channel and flat bar posts between panels. This provides greater security and protection in demanding environments than our regular duty cages. We manufacture user defined pass-throughs and custom doors for areas that require extra physical security.

key applications

- Lockdown Areas
- Conveyorized Sorting Stations
- Postal Distribution Centers
- Bonded Warehouses
- Courts

features & benefits

- 6 Gauge Wire Construction
- Provides Absolute Security & Protection
- Custom Manufactured for the Most Challenging Spaces
- The Strength of Steel
