

Holistic Energy Procurement

Holistic Energy Procurement is an ongoing process and not a single event. At AUS, we provide energy management and procurement in markets nationwide. We competitively bid natural gas and electricity ONLY after developing the procurement and risk strategy with the client.

Reverse Auction

Bidding takes place in real-time, increasing competition and driving down prices. Enhanced transparency allows suppliers to gain instant insight on their price position, and the short sales cycle permits them to take advantage of current market conditions. All of this contributes to the lowest pricing, and best terms possible for the client.

Electric

At AUS, we're more than an energy broker - we're your energy consultant. We'll review your utility bills, analyze existing contracts and develop a strategy to reduce your current costs. We understand that it is more than just shopping for the lowest electric price. And that is why we believe in developing an overall energy management strategy.

Demand Response

Earn income by joining our Demand Response Aggregation Program. With just a moderate curtailment or reduction of your energy use to help the grid on tough days, you'll earn added revenue dollars. Turn your building into a virtual power plant and a revenue generator.

Natural Gas

At AUS, we study the market carefully to develop a plan customized for your needs, saving you time and money. With a certified energy procurement professional as part of our full staff of support specialists, we monitor a wide variety of factors on an on-going basis; helping you stay on top of the market and its ever changing trends.

Residential

AUS negotiates for preferred residential pricing with multiple suppliers. It is because of our ability to create a large buyers' pool of thousands of residents, equal in usage to a large business or industry, that suppliers are willing to work with us; providing lower group rates, unavailable to residents who contract individually with suppliers.

Municipal Aggregation

Municipal Energy Aggregation is about the purchasing power of the masses. Residents reap the benefits of group participation by getting lower prices through bulk purchasing.

Audits

Through our Energy, Lighting, and Utility Audits, AUS identifies additional areas to lower your monthly utility costs.

Benchmarking

Benchmarking provides important baseline data to assess a building's energy use. AUS offers this service to all of its contracted commercial energy clients, at no cost.

Renewable Energy

AUS offers a variety of renewable energy integration options including Renewable Energy Certificates, Virtual Solar, Community Solar Buyer Pools and Virtual Solar Gardens.

Telecom and Data

As a business owner or manager, staying on top of emerging telecom technologies and trends isn't your job - it's ours.
