

Company Overview

Engineering Support Services (ESS) was founded in 2011 to provide engineering services to townhome and condominium associations, restaurants, hotels, and other engineering firms. In 2015, we saw a need for enhanced services, particularly to the condominium and townhome markets. To fill this need, ESS became a Licensed Professional Engineering Firm.

The mission of ESS is to equip our clients for success. We do this by using our realworld construction and engineering experience to help building owners, managers and association boards navigate building integrity issues and capital projects.

The staff at ESS have more than 100 years of combined experience specializing in moisture intrusion and building façade renovation projects. ESS staff regularly attend educational seminars to stay on top ever-changing building codes and product.

The ESS Difference

So how is ESS different from every other engineering company?

Engineering Support Services is dedicated to helping our clients succeed. This commitment involves building rich relationships with our clients that extend beyond the execution of project tasks.

We don't surprise our clients. ESS won't miss milestones or deadlines. We don't deliver cost overruns at the end of a project.

Our proposal time and cost estimates are accurate. We build an in-depth understanding of a project BEFORE we write a proposal.

We attend more training and seminars. We go beyond what's required to maintain our certifications because we know it's important to our client's success.

We keep up to date on codes, regulations and the most modern methodologies. That means building managers and their staff don't have to.

Our staff and managers have hands-on construction experience. As a result, we recommend solutions that are practical and cost-effective to implement.

You'll understand our reports. We write our reports and communication using everyday terms – not esoteric, technical jargon.

We won't design something that can't be installed or implemented. We have hands-on experience with the products we recommend, so we know what works and what doesn't.
