Water Pressure Restoration

(815) 325-9476

DON'T REPLACE THOSE OLD PIPES!

Our service is unique! We can increase your buildings water pressure by removing rust and scale from the domestic water supply pipes without any type of construction. Our highly trained technicians use a specialized machine that generates a continuous pulse of water, which scales the inside of pipes and removes sediment that has been blocking the natural flow of water to faucets and fixtures.

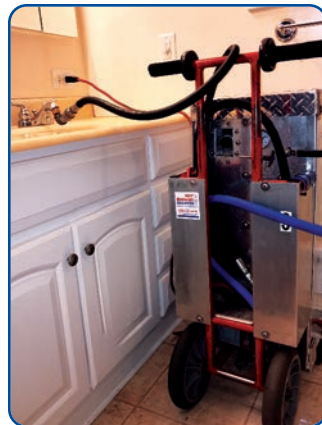

Whether your building is one year old or 100 years old, we can get the water going again!

PROPERTY MANAGERS AND HOMEOWNERS:

Showers, bathtubs, kitchens, laundry machines, utility sinks and entire properties can experience low water pressure. When problems arise, we're on site quickly and when finished we leave no mess. Nothing torn open or replaced. We pride ourselves in getting the job done in a very professional way, and our customer service is 1 of our greatest assets!

The process is usually quick and simple!

- Call or email us to set up an appointment
- The day of service, our technician will call 15 minutes before arrival
- They will show up ready get the job done
- Usually, we only need "access" to the faucet that is affected
- The machine is hooked up directly to the fixture or closest valve (as shown below)
- Removing the sediment can take 10-45 minutes per faucet
- The process is then complete! Your water pressure is back and with No Mess!

WHEN SHOULD YOU CALL US?

- If you notice dramatically low water pressure when 2 or more faucets are running at the same time
- Hot water is taking a long time to get hot
- Building water supply was turned off and on, and now there is weak water pressure
- Tenants complain, when their neighbors run water, thier water pressure drops off
- Or, if your water pressure is weak in general

ADDITIONAL SERVICES

Riser and Return Water Restoration

Long wait times for hot water can be caused by blockages in Risers and Return Lines. We can pin-point the location of these types of blockages and remove the sediment that is disrupting the hot waters flow and circulation.
